

DATA ANALYTICS CHALLENGE 2022

Analysis on Obesity and Overweight

Presented by: Data Master Team

The problem

Company

Inviso was founded in 2014 and is located at Vesterbro.

In August 2020, Inviso was acquired by Devoteam and thus became a part of the Devoteam group. It is now called **Inviso by Devoteam**.

Novo Nordisk is a global healthcare company, founded in 1923. Focused on to find the ultimately cure the diseases we treat

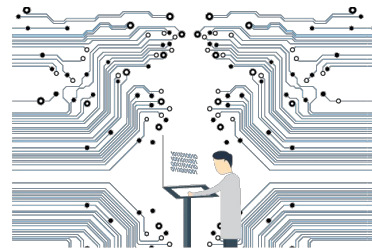

Context

- The historical data for obesity
- Datasets about societal factors to determine which are the key drivers and have the greatest impact.

Problem statement

- Areas with some of the highest rates of childhood and adolescent overweight and obesity, or areas that have seen significant increases in recent years.
- As a result, deciding on a geographical location, which should be considered for Novo Nordisk to potentially launch the program.

Deep-dive into datasets

Data Cleaning

Multi-Platforms

- Jupyter Notebook
- Alteryx
- Tableau
- Power BI
- Excel

Data Mining

Tools

- Pandas, Seaborn, Matplotlib
- In/Out, Preparation, Join, Transform, Reporting, Documentation
- DAX, Power Query, Tabel modeling, Reporting
- Pivot table, Formulas and Functions

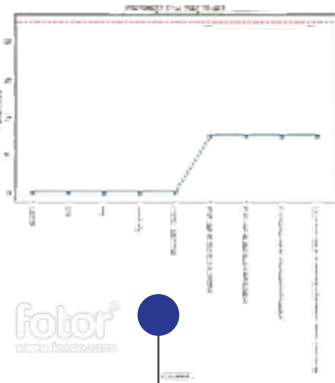

Data visualization

Features

- Presentation (Google Slide)
- Alteryx Reporting
- Tableau Reporting
- Power BI Reporting
- Jupyter Notebook libraries

Implementation

Findings

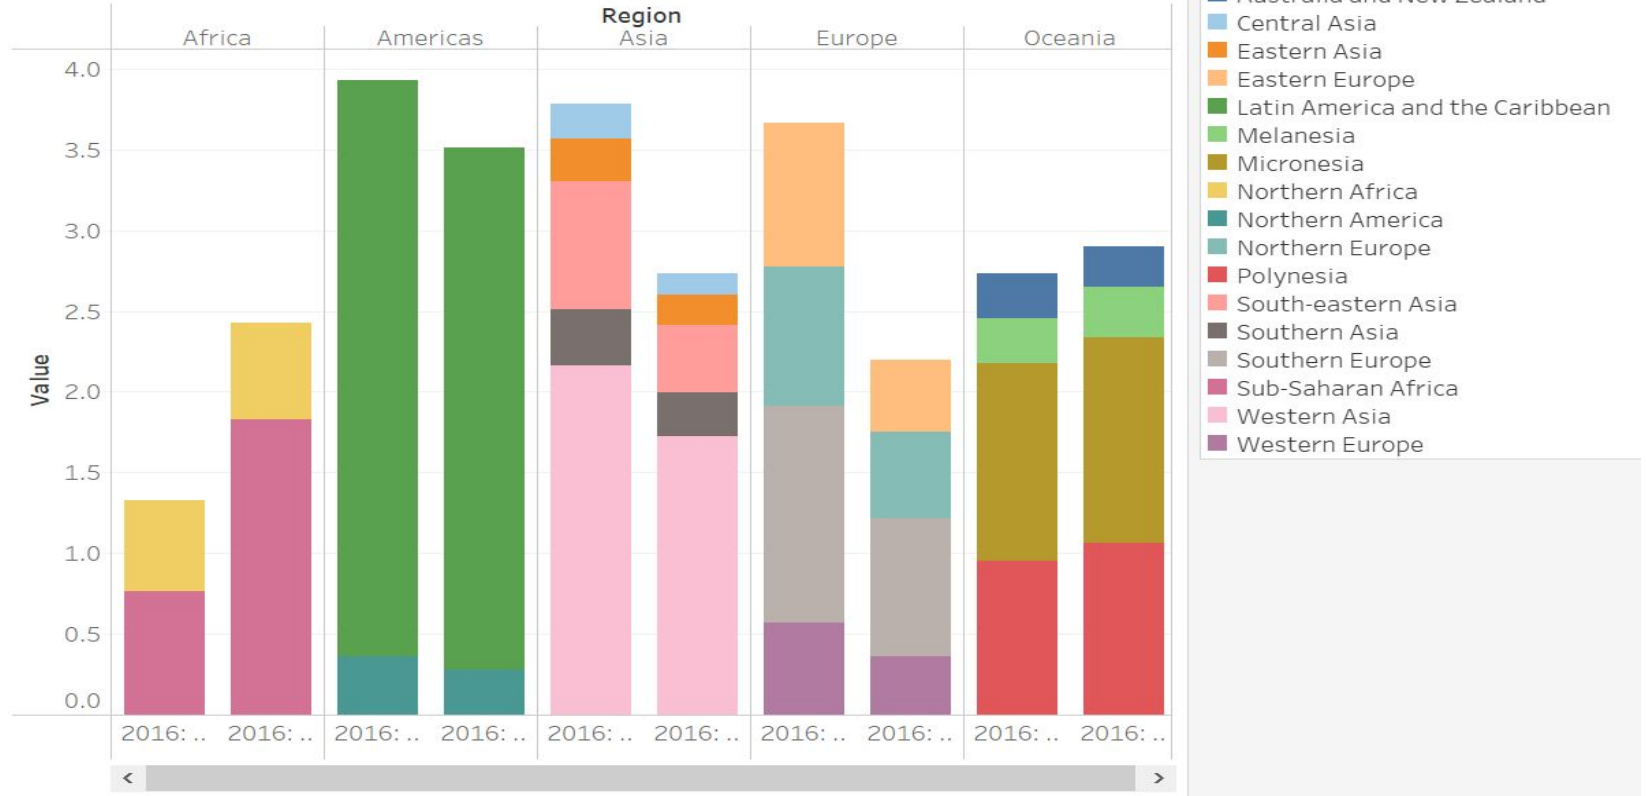

1. Which country to launch the program?

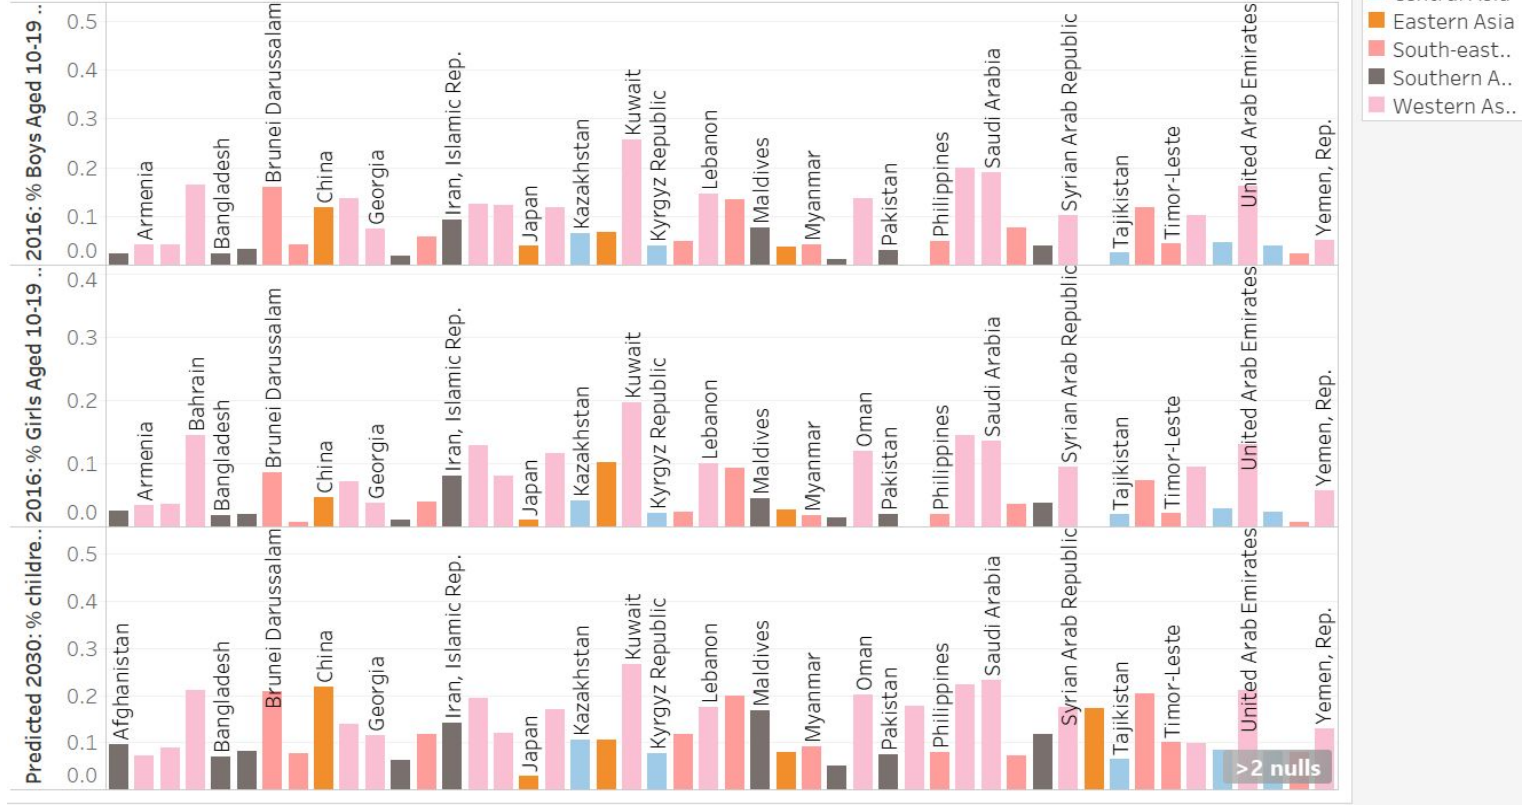

2. Which are the key drivers and have the greatest impact?

3. How should the program approach the selected country and how its success can be measured?

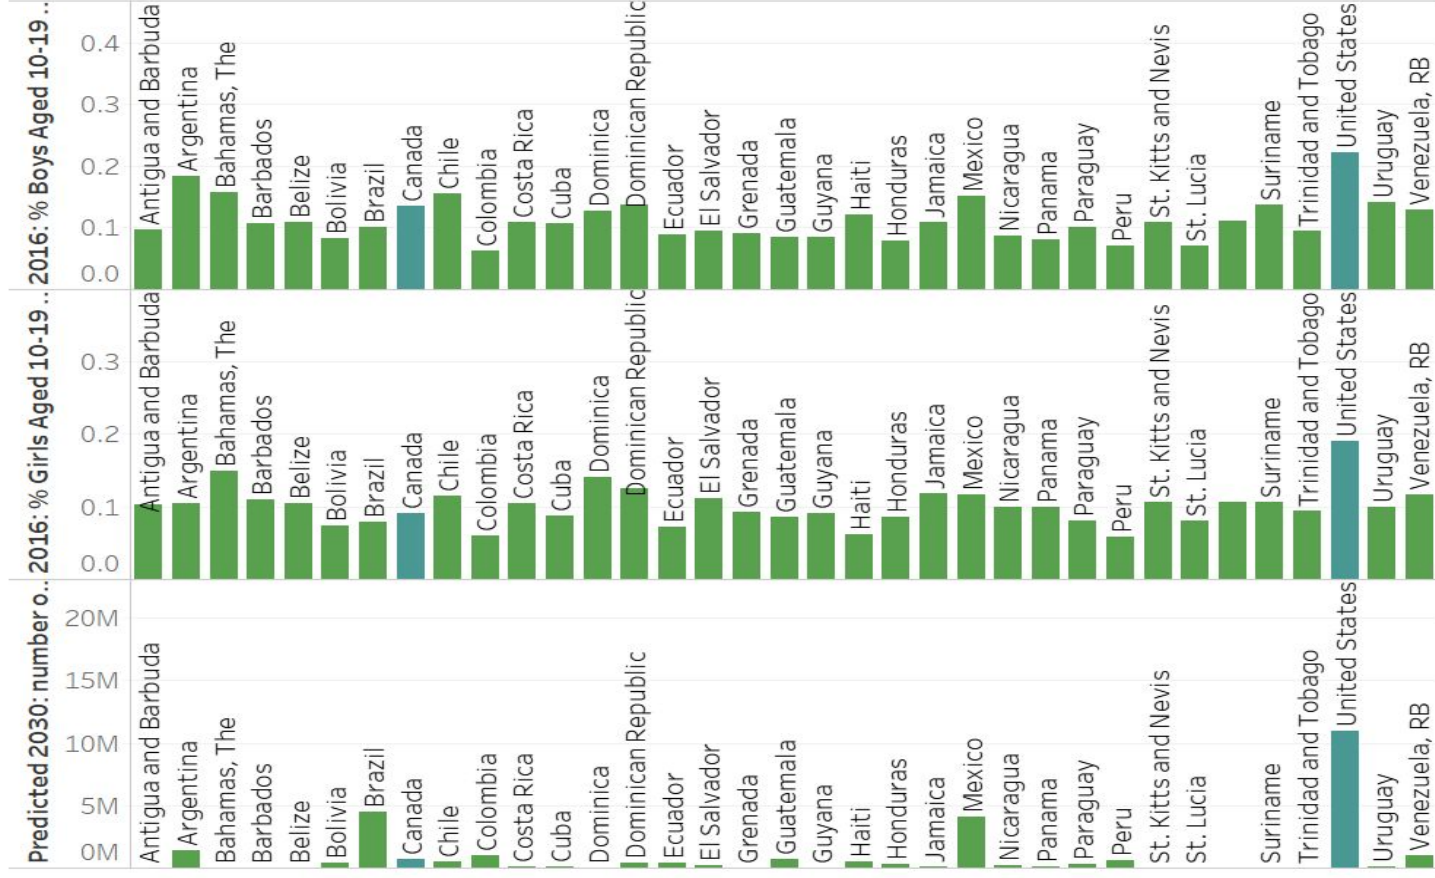

Top 5 Region In Obesity

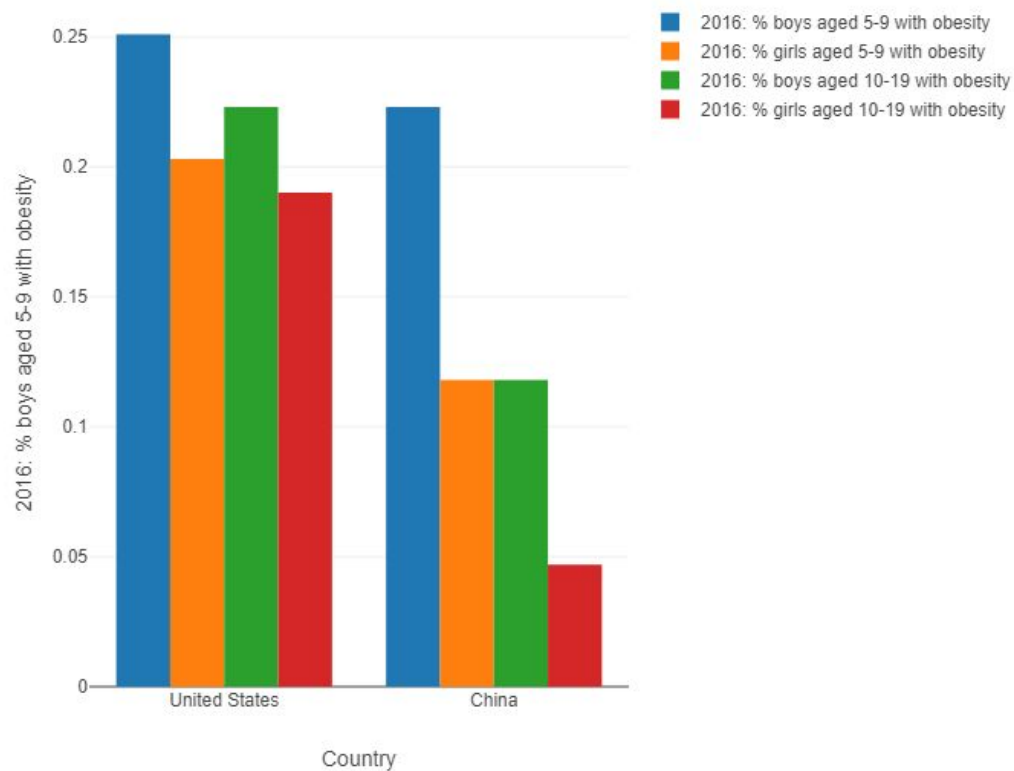

Obesity in Asia Region

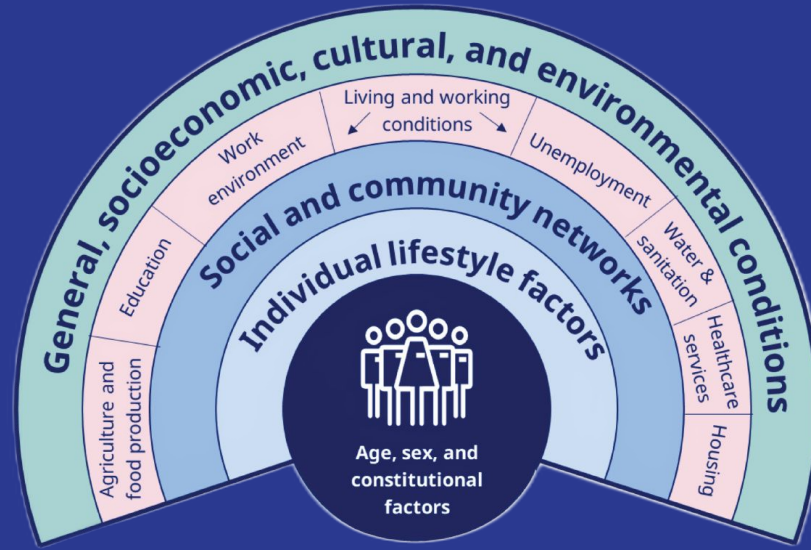

Obesity in America

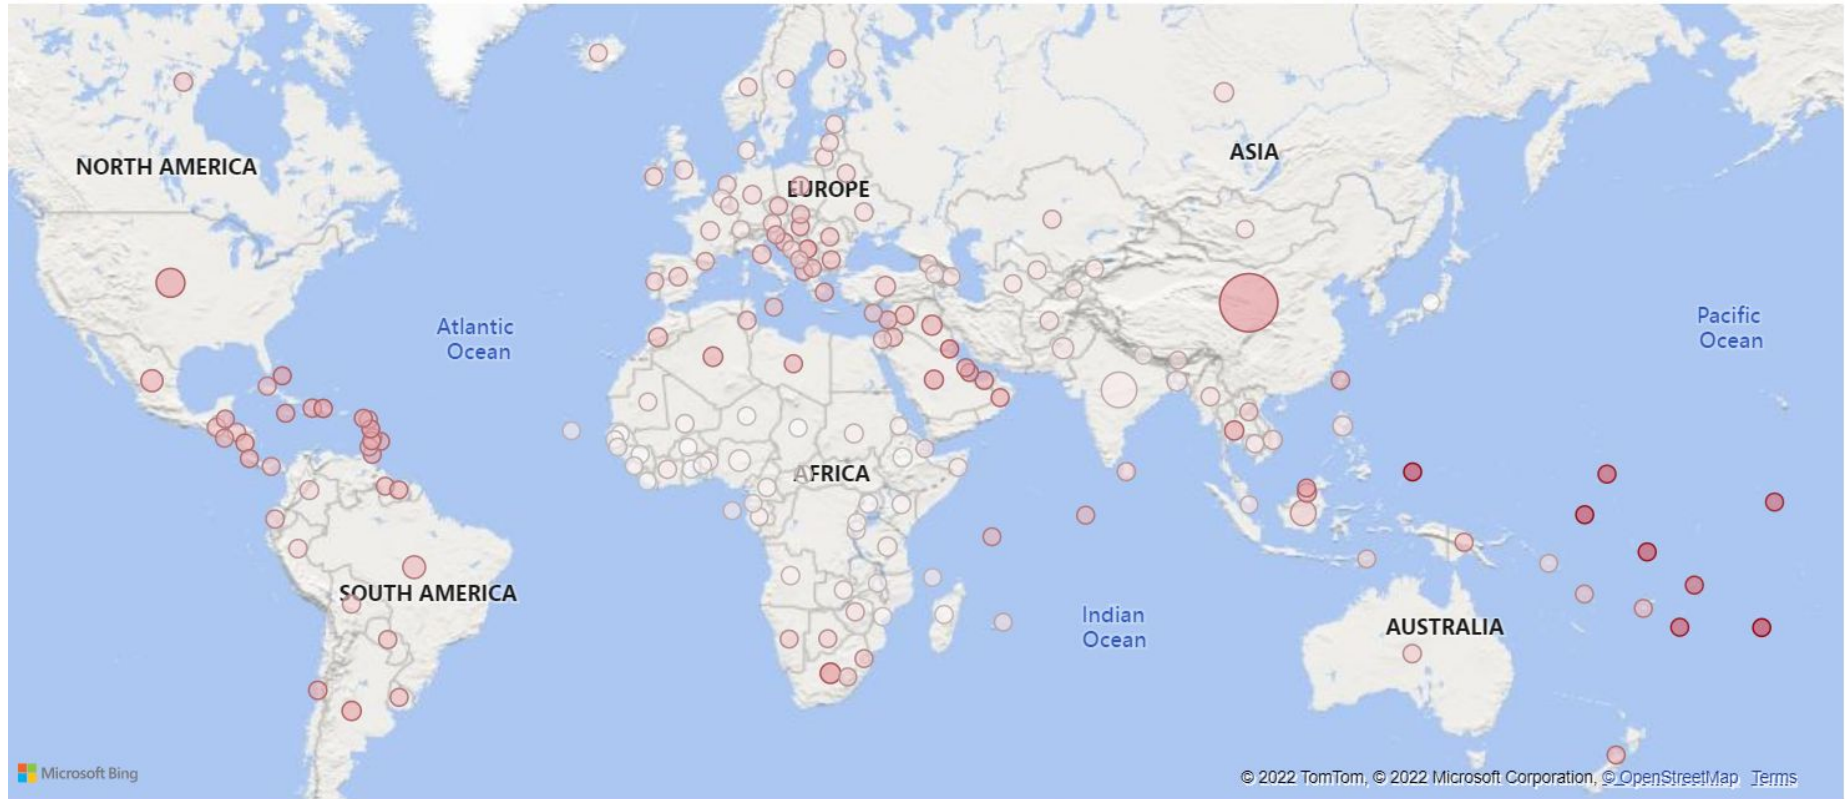

Children Obesity in US and China

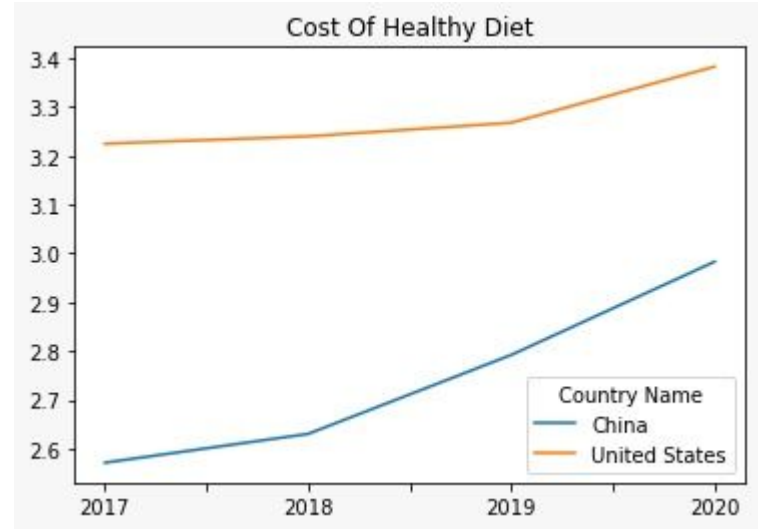

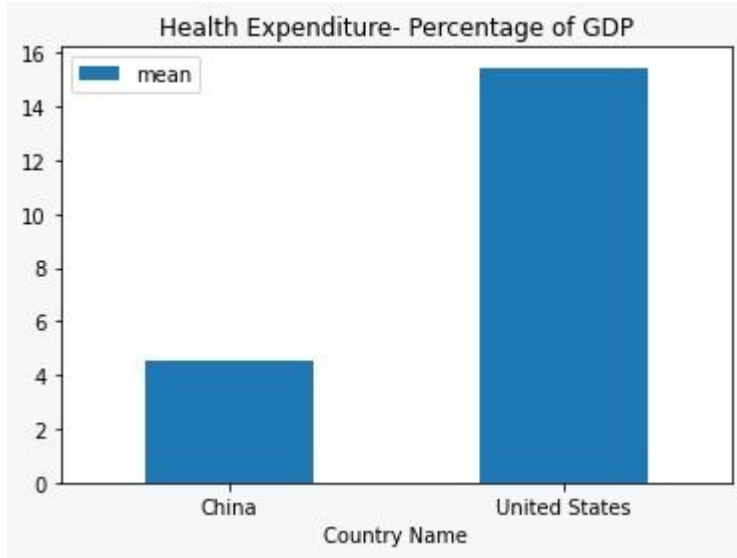

Correlation with other societal factors

Which country to launch the program?

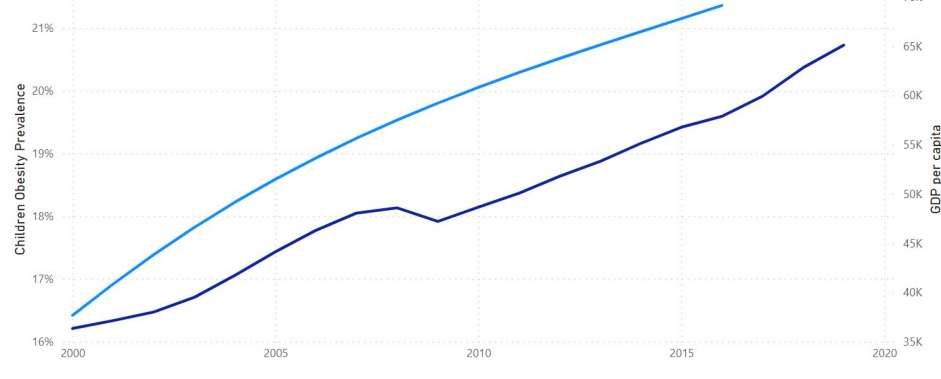

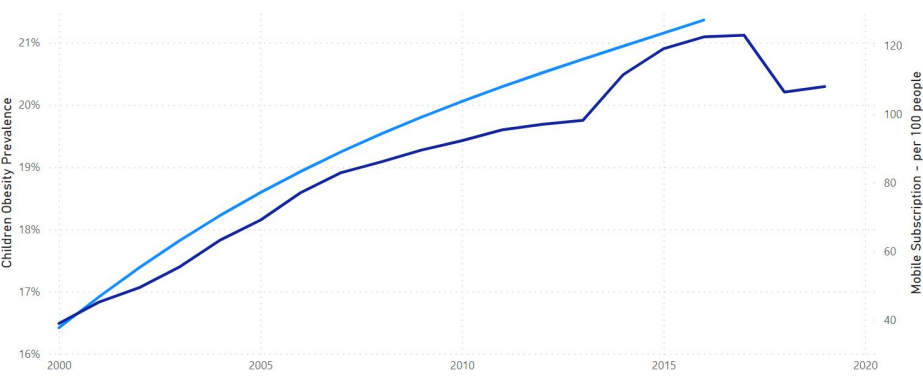

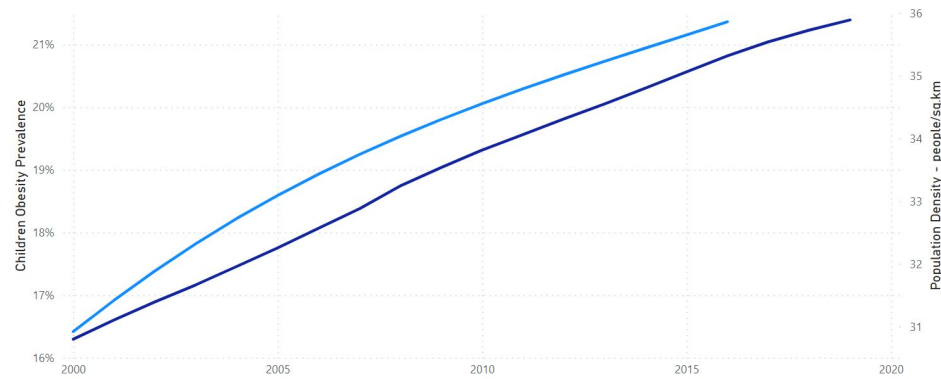

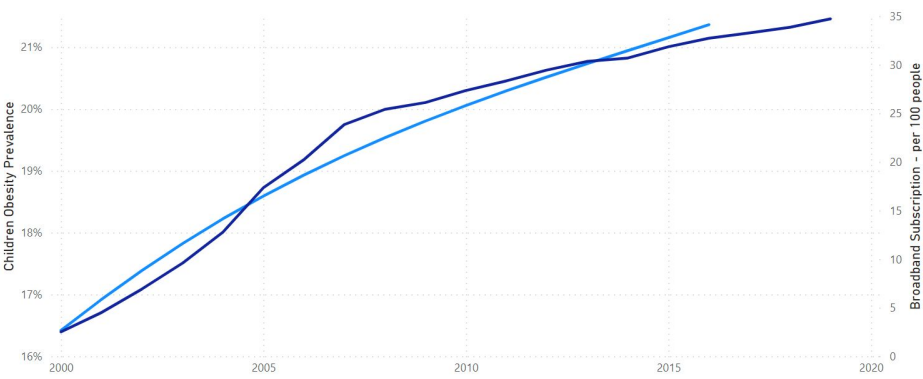

Predicted children obesity prevalence by 2030

Total Health Expenditure of GDP in US and China

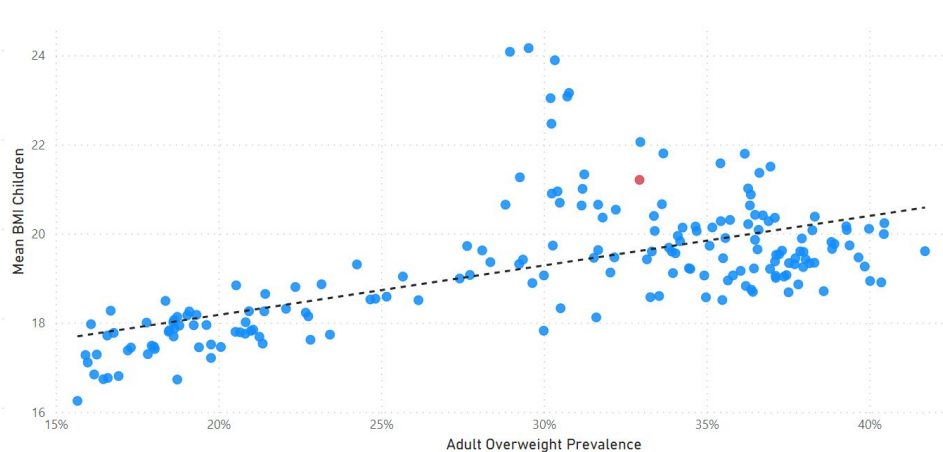

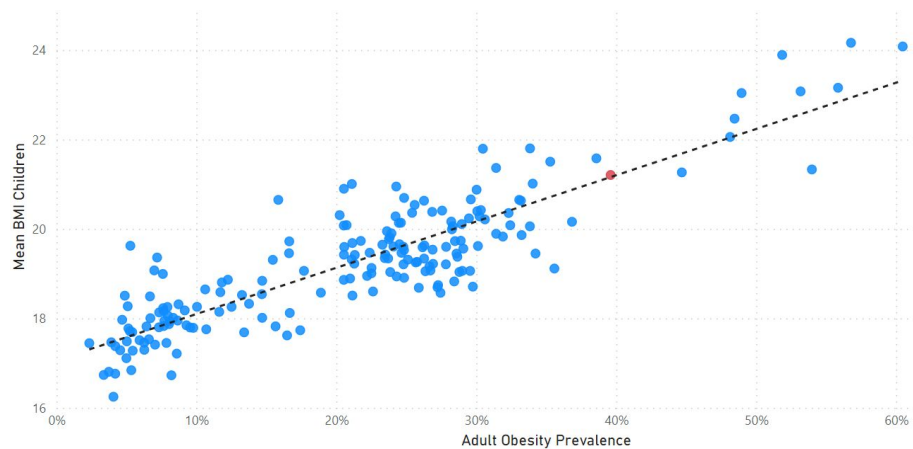

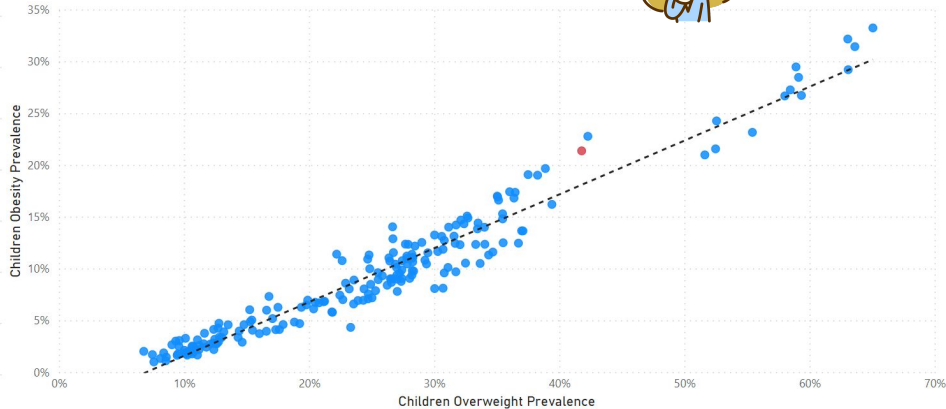

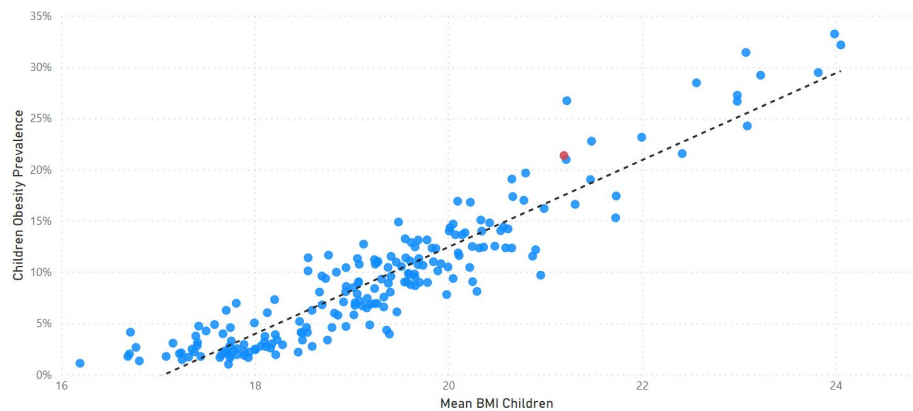

Correlation - Factors drive children obesity prevalence in US

Mobile and Broadband subscription in the US

Population Density and GDP per capita

Correlation - Factors drive children obesity prevalence in US

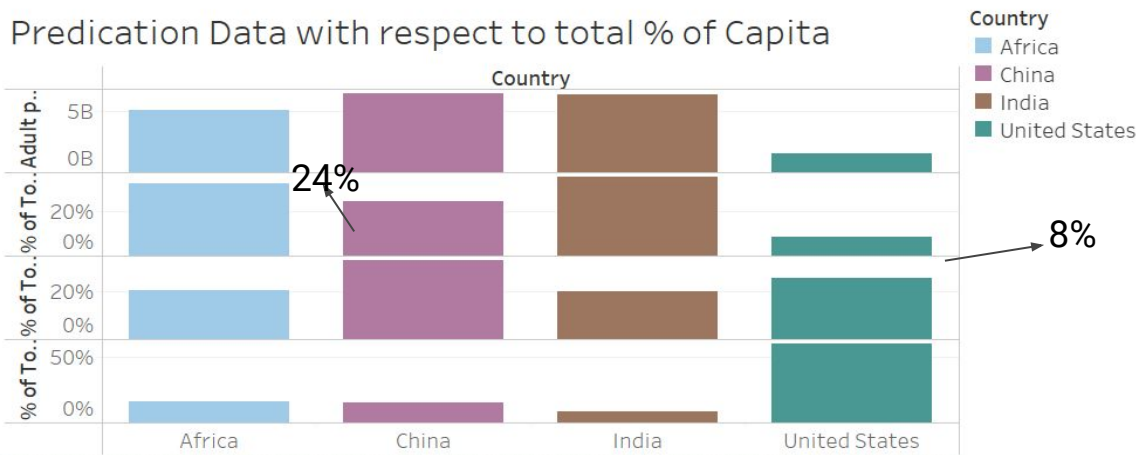

Target Age and Country

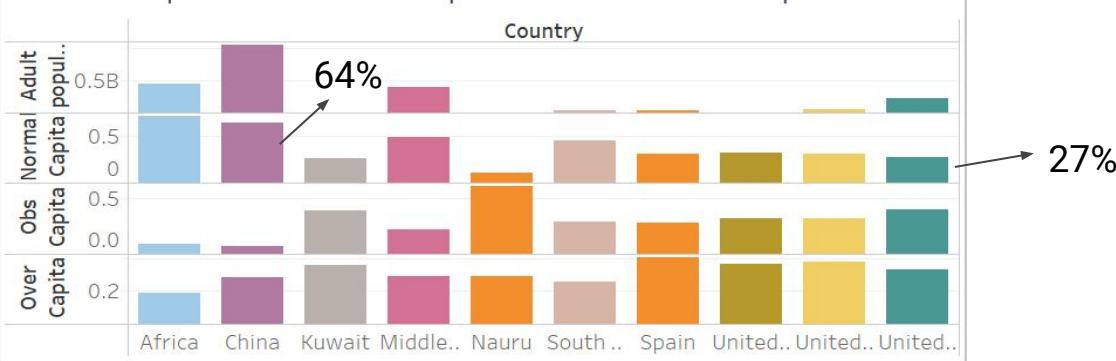

Total % of Capita:

Predication Data with respect to total % of Capita

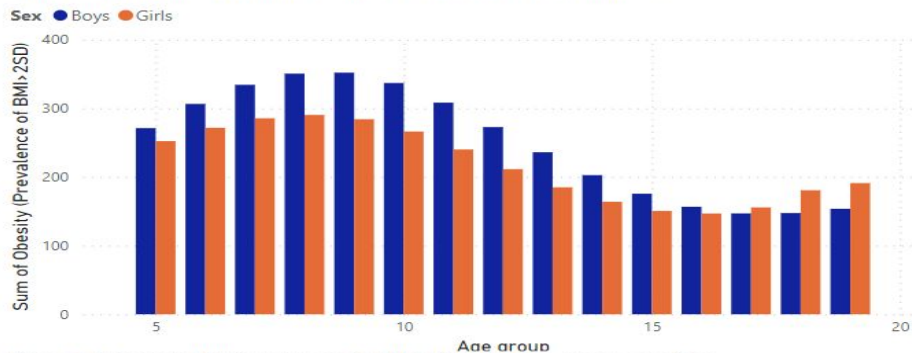

Actual Population with respect to total % of Capita

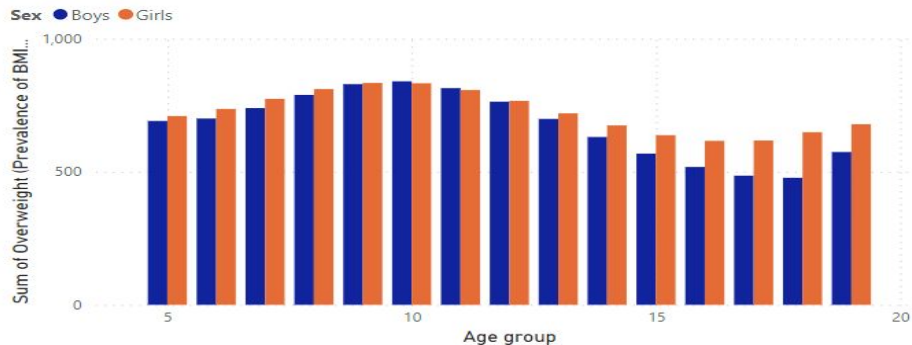

China and United States countries where the percentage of Normal Adults is very low as compared to other countries and these are the countries where the adults are more Obese and Overweight

Obesity, Overweight and Underweight among children

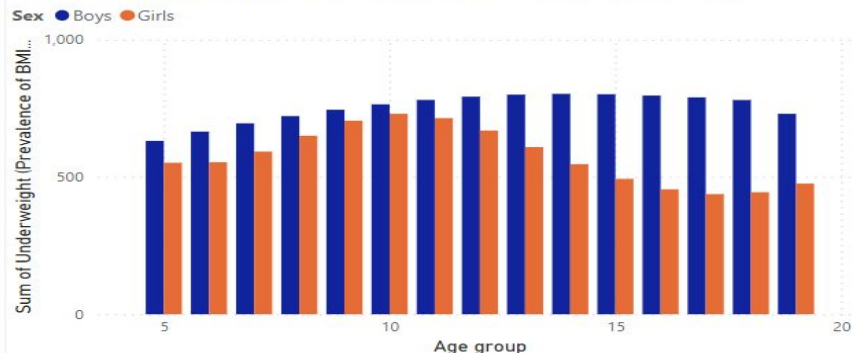

Sum of Obesity (Prevalence of BMI > 2SD) by Age group and Sex

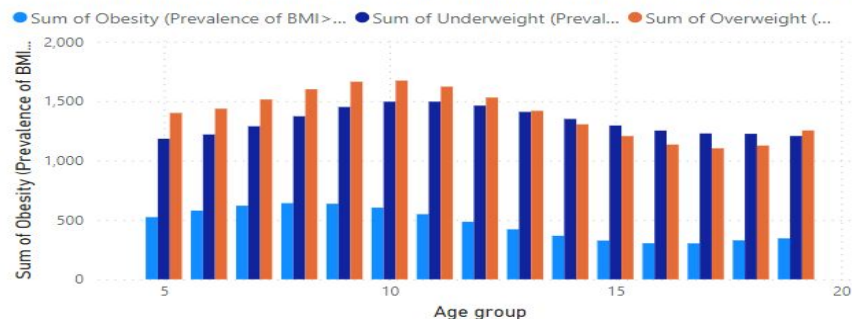

Sum of Overweight (Prevalence of BMI > 1SD) by Age group and Sex

Sum of Underweight (Prevalence of BMI < minus 1SD) by Age group and Sex

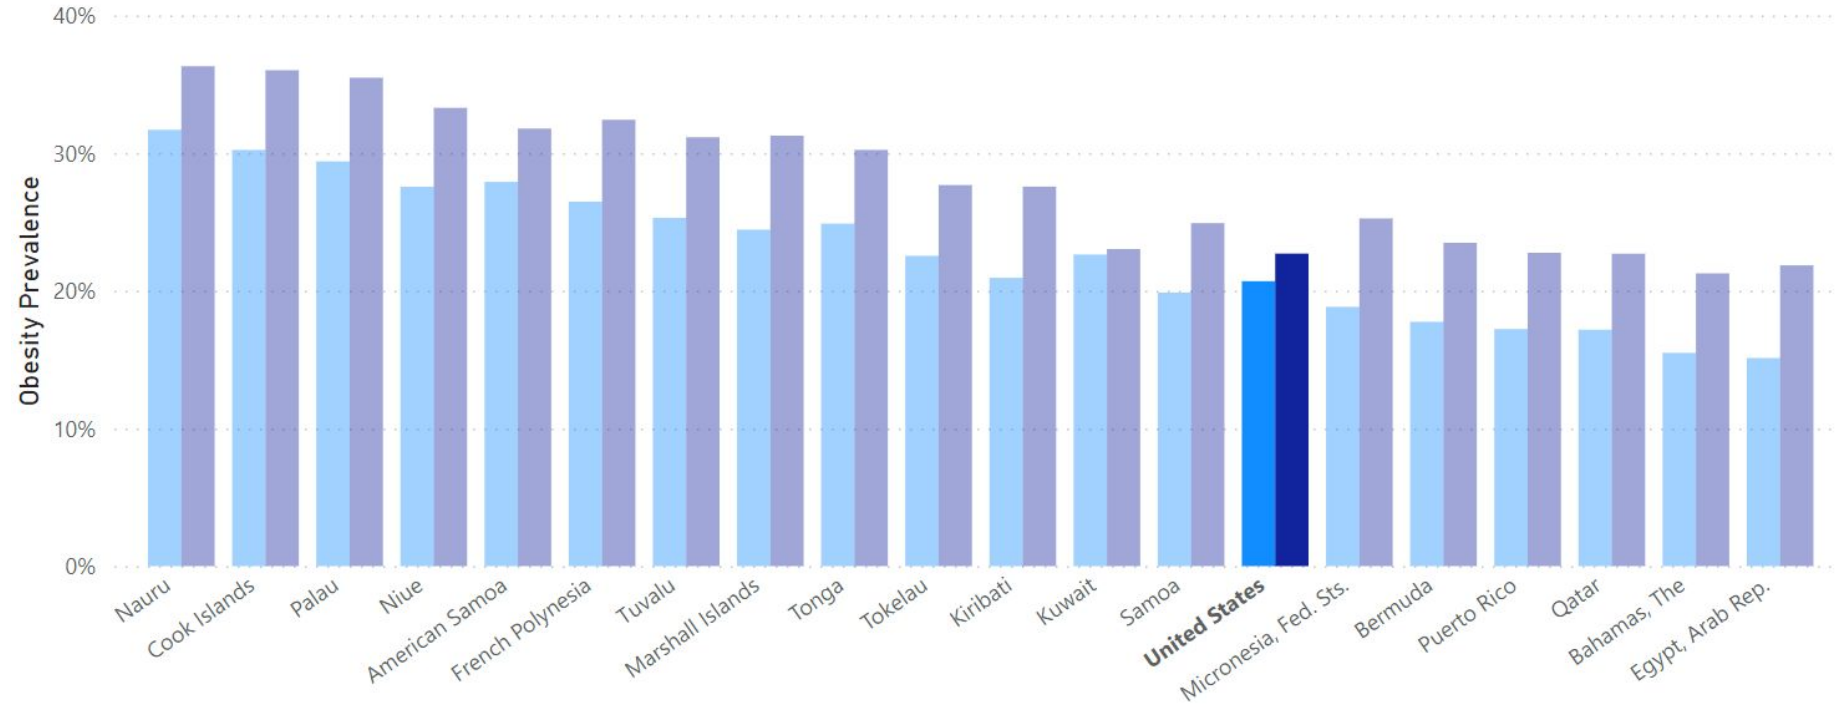

Sum of Obesity (Prevalence of BMI > 2SD), Sum of Underweight (Prevalence of BMI < minus 1SD) and Sum of Overweight (Prevalence of BMI > 1SD) by Age group

Obesity on higher side in the age of 6-14 years in boys and 7-11 years in girls

Which country to launch the program?

Age range ● 10-19 ● 5-9

Top 20 country with highest children obesity prevalence in 2016

What happened NYC?

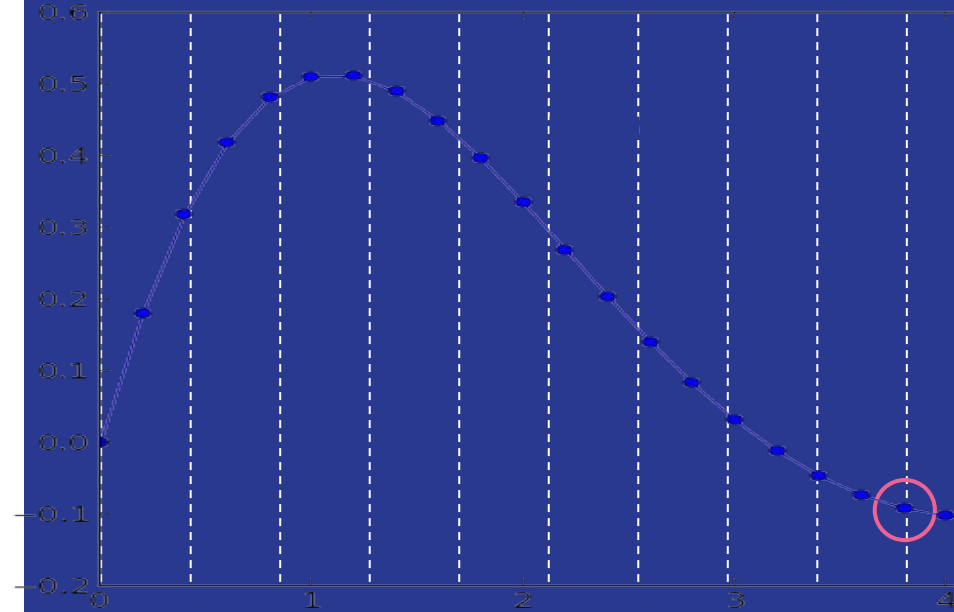

- Obesity and lifestyle related diseases
 - Hypertension
 - Heart Failure
 - Diabetes
 - Ect...
- Fast food industries [1]
 - 241,000 fast food restaurants in US
 - 200 billion USD a year

Based on DTU obesity dataset - Finding

Kilde: <https://youtu.be/DjtE4NblAKI>

Impact

On the ability to prevent childhood and adolescent obesity and serve as an example that with the right approach.

thank you!
